Cyber Security Engineer | Data & IP Protection · DLP/CASB/DSPM · AI Security

SUMMARY

Cyber security engineer with 15+ years in IT, data security and technical team leadership. Plan, design and tailor enterprise deployments of DLP, CASB, DSPM and AI security products, so that customers can protect sensitive data and intellectual property from both malicious and accidental exposure. Build automation tooling for security testing and internal engineering environments. Built and led internal IT and software development teams, and present to senior management up to C-level.

EXPERIENCE

Senior Cyber Security Engineer, Professional Services

May 2026 - Present

Forcepoint LLC | DLP, CASB, DSPM, AI Security

Austin, TX

- Deliver professional services to enterprise customers across DLP, CASB, DSPM and AI security products: requirements gathering, solution planning, architecture and design.
- Onboard customers and tailor deployments to their environments, including data discovery, classification, fingerprinting, policy design and phased rollout.
- Map where sensitive data moves and which channels are permitted, and design controls with the customer security and IT teams.
- Advise on securing AI usage and AI assisted workflows, including the risk of data leakage through AI tools.
- Run design workshops and administrator enablement sessions, and document the delivered architecture.

Principal Technical Support Engineer

May 2019 - May 2026

Forcepoint LLC | DLP, CASB, DSPM, EDR

Austin, TX

Achievements:

- Designed and built an in-house physical macOS cloud for support teams, including provisioning automation, remote access, user isolation and patching of the host machines. (2026)
- Released www.dlpprobe.com, a DLP testing and scheduling automation tool covering network and endpoint channels. (2024)
- Built a troubleshooting automation application (Python, Tkinter) for the DLP Endpoint product, and a separate automation tool for the network gateway products. (2022, 2023)
- Developed the concept and delivered a demo to company C-level of an AI powered automation product for support operations. Member of the AI adoption committee and of product release committees. (2025)
- Circle of Excellence award as top performing technical support engineer. (2023, 2026)
- Maintained 100% positive CSAT for the past 5 years.

Responsibilities:

- Kept Forcepoint DLP, CASB, DSPM and EDR products working in enterprise customer environments, troubleshooting endpoint, network, management server and cloud components.
- Diagnosed issues across Linux and Windows Server infrastructure: installation and upgrades, authentication and authorization, certificates, connectivity, logging and performance.
- Analysed policy logic and detection behaviour, and proposed policy and architecture improvements to customers and to product teams.
- Handled technical escalations, and supported pre-sales and professional services delivery.

- Wrote troubleshooting documentation and training material for internal teams and customer administrators.
- Mentored and coached support engineers on technical and customer-facing skills. Screened resumes, interviewed, hired and onboarded new team members.

B2B Large Accounts Team Manager

Oct 2016 to Feb 2019

Orange S.A.

Moldova

- Led a team of B2B account professionals at the largest telecom provider in the country. Set direction, priorities and individual development plans.
- Hired and onboarded new team members, and coached the team through escalations and retention cases.

PREVIOUS EXPERIENCE

Orange | M2M and IoT Product Manager

2013 - 2016

- Took 2 M2M products through the full Time-to-Market process, bridging engineering, product and customers, and translated business requirements into technical specifications for the delivery teams.

Medpark International Hospital | IT Manager

2010 - 2013

- Planned and built the entire IT ecosystem of a newly constructed private hospital, from design through deployment: network, servers, workstations, medical system integrations and backup.
- Hired, trained and managed the internal IT team, and managed the in-house software development team.
- Owned access control, user provisioning and data protection for clinical and administrative systems holding patient data.
- Set IT policy, selected vendors and reported to hospital management.

SECURITY & TECHNICAL SKILLS

Threat modeling (data flow diagrams, trust boundaries, STRIDE) · Insider risk & intellectual property protection · Data Loss Prevention (DLP) · Cloud Access Security Broker (CASB) · Data Security Posture Management (DSPM) · Endpoint Detection & Response (EDR) · Zero Trust Network Access (ZTNA) · Email security · Data discovery, classification & fingerprinting · Security policy development & documentation · Authentication & authorization · Linux and Windows Server administration & hardening · Patch management · Audit logging & security monitoring · Incident response & investigation · Networking & VPN · Python, SQL · AI security & securing AI assisted workflows (data leakage through AI tools)

LEADERSHIP

Technical team leadership · Hiring, onboarding & mentoring engineers · Cross-functional collaboration with engineering, product and IT · Translating security requirements into actionable plans · Communicating risk and mitigation priorities to senior management

EDUCATION

Bachelor of Science in Computer Systems Engineering, Free International University of Moldova

Certifications: CISSP (expected 2026), CCNA

Languages: English, Romanian, Russian
